SeeLess: Pitch Document

Nov 13, 2026 @Sanskar , @Gargi

Solution pitch

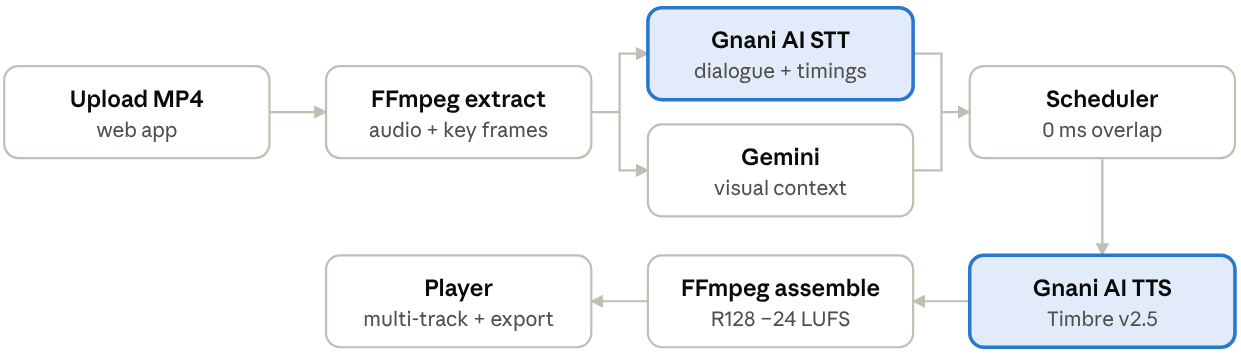

Every scene, heard. Most videos have no audio description, so blind and low-vision viewers miss the picture. SeeLess adds spoken narration to any MP4, placed only in the silent gaps between dialogue.

- **Hear:** Gnani AI Speech-to-Text times every line of dialogue.
- **See:** Gemini describes actions and expressions.
- **Speak:** Gnani AI TTS Timbre v2.5 voices it in the gaps, 0 ms overlap.

Built on Gnani AI STT + TTS Timbre v2.5 · Gemini · FastAPI · Celery + Redis · FFmpeg · Next.js 15

Gnani AI (blue) hears and speaks; Gemini only sees

SeeLess pipeline · 8 steps, 2 Gnani AI models

Key decisions

We chose	Instead of	Win
Gnani AI STT for dialogue only	Describing over a full transcript	Exact speech boundaries to schedule around

We chose	Instead of	Win
Deterministic scheduler	Asking an LLM to place narration	Zero overlap, repeatable output
Gemini for visuals only	One model for everything	Gnani AI owns hearing and speaking; vision stays swappable
